CONTENTS OF VOLUME 152

NUMBER 1, JANUARY 1986

pH-Stat Titration Method for Dihydrofolate Reductase Activity Measurements: Application to Determination of Substrate Michaelis Constant and Antifolate Inhibition Constant	<i>R. Gilli, J. C. Sari, L. Sica, M. Bourdeaux, and C. Briand</i>	1
Comparison of Approaches to the Instrumental Response Function in Fluorescence Decay Measurements	<i>Zbigniew S. Kolber and Mary D. Barkley</i>	6
Use of <i>N</i> -Acetyl-2'- <i>O</i> -methyllactosamine as a Specific Acceptor for the Determination of α -L-(1 $\rightarrow$ 3)-Fucosyltransferase in Human Serum	<i>Ragupathy Madiyalakan, Shin Yazawa, Saeed A. Abbas, Joseph J. Barlow, and Khushi L. Matta</i>	22
Purification of a Light-Harvesting B880 Complex from Wild-Type <i>Rhodospirillum rubrum</i>	<i>Guillermo Giménez-Gallego, Carmen Fenoll, and Juan M. Ramírez</i>	29
A Longitudinal Slicer for Obtaining Multiple Uniform Slices from Cylindrical Polyacrylamide Gels	<i>M. R. V. Murthy and P. de Grandpré</i>	35
A Sensitive Assay for Proteolytic Activity Using Fluorescein-Labeled Gelatin Coupled to Sepharose 4B as Substrate	<i>Ursula Tislar and Hans-Werner Denker</i>	39
Quantitative Determination of Intracellular, Ferritin-Associated Radioactive Iron by High-Performance Liquid Chromatography and Immunoprecipitation	<i>Djuro Josic, Elena Mattia, Gilbert Ashwell, and Jos van Renswoude</i>	42
Determination of Michaelis-Menten Parameters from Initial Velocity Measurements Using Unstable Substrate	<i>Tamás Keleti</i>	48
Quantitative Analysis of a Polysulfated Xylan (SP54) in Urine Using Gas-Liquid Chromatography	<i>Christopher E. F. Lee, Haydn E. Edwards, Suppiah Navaratnam, and Glyn O. Phillips</i>	52
Method for Determination of Pyrrolizidine Alkaloids and Their Metabolites by High-Performance Liquid Chromatography	<i>Bogdan Kedzierski and Donald R. Buhler</i>	59
Half-Site Editing: An <i>in Vitro</i> Mutagenesis Procedure for Truncating a DNA Fragment and Introducing a New Restriction Site	<i>Kenneth J. Livak and Erik A. Whitehorn</i>	66
An Exponential Gradient Maker for Use with Minigel Polyacrylamide Electrophoresis Systems	<i>Thomas J. Smith and J. Ellis Bell</i>	74
Determination of Bacterial Ammonia Pools Using <i>Myxococcus virescens</i> as an Example	<i>Klaus Gerth and Hans Reichenbach</i>	78
Detection of Femtomole Quantities of Proteases by High-Performance Liquid Chromatography	<i>Jeffrey D. Green</i>	83
A Nitrocellulose Filter Binding Assay for Ribonucleotide Reductase	<i>Karin Söderman and Peter Reichard</i>	89
Protein Transfer from Fixed, Stained, and Dried Polyacrylamide Gels and Immunoblot with Protein A-Gold	<i>G. Perides, U. Plagens, and P. Traub</i>	94
Separation of Nuclear cAMP Independent Protein Kinases NI and NII from their Chromosomal Protein Substrates and Enzyme Inhibitors by the Use of a Casein-Phosvitin-Sepharose Column	<i>Marc Delpech, Florence Levy-Favatier, and Jacques Kruh</i>	100
Quantitation of Lipid Peroxidation Products by Gas Chromatography-Mass Spectrometry	<i>Helen Hughes, Charles V. Smith, Janice O. Tsokos-Kuhn, and Jerry R. Mitchell</i>	107

A New Rapid Procedure for the Preparation of Plasmid DNA	
<i>Peter A. D. Edwardson, Tony Atkinson, Christopher R. Lowe, and David A. P. Small</i>	215
Purification of Small Oligonucleotides by Polyacrylamide Gel Electrophoresis and Transfer to Diethylaminoethyl Paper	
<i>A. Vance Vorndam and Joanne Kerschner</i>	221
A New Assay for <i>N</i> -Hydroxyarylamine <i>O</i> -Acetyltransferase: Reduction of <i>N</i> -Hydroxyarylamines through <i>N</i> -Acetoxyarylamines	
<i>Kazuki Saito, Atsuko Shinohara, Tetsuya Kamataki, and Ryuichi Kato</i>	226
Dideoxy Sequencing Method Using Denatured Plasmid Templates	
<i>Masahira Hattori and Yoshiyuki Sakaki</i>	232
Enzymoblotting: A Method for Localizing Proteinases and Their Zymogens Using <i>para</i> -Nitroanilide Substrates after Agarose Gel Electrophoresis and Transfer to Nitrocellulose	
<i>Bertil G. Ohlsson, Björn R. Weström, and Börje W. Karlsson</i>	239
Recovery of Tryptophan from 25-Minute Acid Hydrolysates of Protein	
<i>Yoshiko Yokote, Kunio Murayama Arai, and Kiso Akahane</i>	245
Determination of the Critical Micelle Concentration of Surfactants Using the Fluorescent Probe <i>N</i> -Phenyl-1-naphthylamine	
<i>Rui M. M. Brito and Winchil L. C. Vaz</i>	250
Determination of the Concentration and Specific Activity of Acetone in Biological Fluids	
<i>Victor C. Gavino, Bernard Vinet, France David, Michel Garneau, and Henri Brunengraber</i>	256
Sizing and Separation of Liposomes, Biological Vesicles, and Viruses by High-Performance Liquid Chromatography	
<i>Michel Ollivon, Anne Walter, and Robert Blumenthal</i>	262
Genomic 5-Methylcytosine Determination by ³² P-Postlabeling Analysis	
<i>Vincent L. Wilson, Ruth A. Smith, Herman Autrup, Hans Krokan, David E. Musci, Ngoc-Nga-Thi Le, Jim Longoria, David Ziska, and Curtis C. Harris</i>	275
Isolation of ADP-Ribosyltransferase by Affinity Chromatography	
<i>Helmut J. Bartscher, Bernhard Auer, Helmut Klocker, Manfred Schweiger, and Monica Hirsch-Kauffmann</i>	285
Determination of Impurities in Nucleoside 3'-Phosphoramidites by Fast Atom Bombardment Mass Spectrometry	
<i>Paul C. Toren, David F. Betsch, H. Lee Weith, and James M. Coull</i>	291
The Purification of Alphavirus Virions and Subviral Particles Using Ultrafiltration and Gel Exclusion Chromatography	
<i>Alan J. Crooks, John M. Lee, and John R. Stephenson</i>	295
Acceleration of Nucleic Acid Hybridization Rate by Polyethylene Glycol	
<i>Richard M. Amasino</i>	304
Advantages of Picrate Fixation for Staining Polypeptides in Polyacrylamide Gels	
<i>José Luis Stephano, Meredith Gould, and Luis Rojas-Galicia</i>	308
The Analysis of Low Levels of γ -Glutamyltransferase Activity by High-Performance Liquid Chromatography with Electrochemical Detection	
<i>John A. Hoskins and Femi F. Davies</i>	314
Technique and Apparatus for Automated Fractionation of the Contents of Small Centrifuge Tubes: Application to Analytical Ultracentrifugation	
<i>Arun K. Attri and Allen P. Minton</i>	319
Biotinylated Proteins as Molecular Weight Standards on Western Blots	
<i>Dean Della-Penna, Rolf E. Christoffersen, and Alan B. Bennett</i>	329
The Use of Antibody Immobilized on Supports Coated with Polyglycidyl Methacrylate in Saturation Analysis	
<i>P. Rauch, M. Marek, V. Matas, and Z. Vodrážka</i>	333

A Hand-Held Photometer for Quantitative Dot-Immunobinding Assays	<i>Clément Bordier and Philippe Ryter</i>	113
Measurement of Precursors for α -Amidated Hormones by Radioimmunoassay of Glycine-Extended Peptides after Trypsin-Carboxypeptidase B Cleavage	<i>Linda Hilsted and Jens F. Rehfeld</i>	119
Simultaneous Determination of Histamine and N^7 -Methylhistamine with High-Performance Liquid Chromatography Using Electrochemical Detection	<i>Kazunori Mine, Kenneth A. Jacobson, Kenneth L. Kirk, Yasuo Kitajima, and Markku Linnoila</i>	127
Determination of the Number of Endothelial Cells in Culture Using an Acid Phosphatase Assay	<i>Daniel T. Connolly, Mary Beth Knight, Nikos K. Harakas, Arthur J. Wittwer, and Joseph Feder</i>	136
Fatty Acid Composition of Leaf Lipids Determined after Combined Digestion and Fatty Acid Methyl Ester Formation from Fresh Tissue	<i>John Browse, Peter J. McCourt, and Christopher R. Somerville</i>	141
Fluorescent Hydrazides for the High-Performance Liquid Chromatographic Determination of Biological Carbonyls	<i>James Michael Anderson</i>	146
Ganglioside Glycosyltransferase Assay Using Ion-Exchange Chromatography	<i>Kevin M. Walton and Ronald L. Schnaar</i>	154
High-Performance Liquid Chromatography of Aldehydes and Acids Formed in Monoamine Oxidase-Catalyzed Reactions	<i>P. H. Yu, B. A. Bailey, and D. A. Durden</i>	160
Fluorometric Determination of Polystyrene Latex: Application to the Measurement of Phagosomes and Phagocytosis	<i>Christian D. Muller and Francis Schuber</i>	167
Specific Tritium Labeling of Glucosyl- and Galactosylceramides at the 6-Position of the Carbohydrate Moiety Using CrO_3 -Graphite	<i>Seigou Usuki and Yoshitaka Nagai</i>	172
Determination of Free Choline in Plasma and Erythrocyte Samples and Choline Derived from Membrane Phosphatidylcholine by a Chemiluminescence Method	<i>Indrajit Das, Jacqueline de Belleruche, Christopher J. Moore, and Frank Clifford Rose</i>	178
Determination of Calmodulin by Competitive Binding Assay	<i>Harry LeVine III, Naji Sahyoun, and Pedro Cuatrecasas</i>	183
High-Performance Liquid Chromatography Column Length Designed for Submicrogram Scale Protein Isolation	<i>James D. Pearson</i>	189
Enzyme-Linked Coagulation Assay. II. A Sensitive Assay for Tissue Factor and Factors II, VII, and X	<i>George J. Doellgast and Henry Rothberger</i>	199

BOOK REVIEW

<i>Alternative Immunoassays</i> , Edited by W. P. Collins	Reviewed by <i>Marlene Deluca</i>	208

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell and tissue culture techniques that are of general application.
- Sequencing and synthesis of nucleic acids; chemical mutagenesis.
- Purification methods for enzymes and other proteins which contain a novel aspect and in which a high level of purity has been achieved.
- Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.
- Pharmacological and toxicological research techniques that have a biochemical approach.
- Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Information for Authors is published in each July issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal now requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the title.

Please number all pages of the manuscript.

Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers. (Please see the Appendix at the end of the extended Instructions to Authors published in the July 1, 1983 issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is $8\frac{1}{2} \times 11$ inches (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index*, 1980. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Stein, S., and Udenfriend, S. (1984) *Anal. Biochem.* **136**, 7-23.
2. Metzler, D. E. (1977) *Biochemistry: The Chemical Reaction of Living Cells*, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) in *The Proteins* (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246-409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.

ACADEMIC PRESS

P R E S E N T S

An anthology of significant research by eminent scientists of the
National Institutes of Health. . .

NIH: An Account of Research in Its Laboratories and Clinics

Editor:

DeWITT STETTEN, JR.

Associate Editor:

W.T. CARRIGAN

1984, 576 pp., \$35.00/ISBN: 0-12-667980-0

The National Institutes of Health, the largest medical research institution in the world, has described in one volume its major scientific achievements since its establishment in 1938.

NIH: An Account of Research in Its Laboratories and Clinics, newly written by forty-eight leading investigators, includes the research approaches of a number of famous scientists and Nobel laureates, who cover basic and clinical studies in a wide variety of biomedical disciplines. Presenting frontier knowledge against a historical background, the contributions to this volume are clearly written.

A foreword by Lewis Thomas is followed by such topics as:

- neurochemistry • neurological disorders • schizophrenia • nutrition studies • tissue culture • microbiology • immunology • organic chemistry • proteins • enzymology • genetics • virus diseases • oncogenes • endocrinology • spectroscopy • heart surgery • cancer therapy.

CONTENTS: L. Thomas, Foreword. D. Stetten, Jr., Prologue. S. M. Rosenthal, The Early Days. R. A. Cohen, Studies on the Etiology of Schizophrenia. I. J. Kopin, Neurotransmitters and Neuropsychopharmacology. D. B. Tower, The Neurosciences—Basic and Clinical. J. G. Bieri, Nutrition Research. **Tissue Culture:** V. J. Evans and K. K. Sanford, The Tissue Culture Section, NCI. H. Eagle, Studies in Cell Biology, NIAID. P. G. Nelson, The Nervous System in Vitro. R. M. Cole, Bacteriology and Mycology. J. H. Hoofnagle, Viral Hepatitis. **Immunology—Basic and Clinical:** W. E. Paul and T. A. Waldmann, Introduction. T. A. Waldmann, Immunoglobulin Structure and Genetics. W. E. Paul, Genetic Control of Cellular Interactions

and Specific Immune Response Genes. W. E. Paul, Lymphokines. T. A. Waldmann, Clinical Immunology. B. Witkop, Organic Chemistry in a Biomedical Research Organization. **Development of Enzymology:** H. Tabor, Early Enzymological Research. B. L. Horecker, Elucidation of the Pentose Phosphate Pathway. A. Meister, Recollections about Enzymology and Amino Acid Biochemistry at NCI. **Studies on Proteins:** C. B. Anfinsen, The Synthesis and Folding of Protein Chains. A. N. Schechter, Protein Conformation and Dynamics. I. M. Chaiken, Synthesis, Semisynthesis, and Protein Function. B. Brewer, Sequence Analysis. K. A. Piez, Collagen Research. R. S. Adelstein, Muscle Research. R. G. Martin, A Revisionist View of the Breaking of the Genetic Code. W. F. Anderson, From the Genetic Code to Beta Thalassemia. **Genetic Diseases:** H. M. Kalckar, Galactosemia: An Enzymological Approach. J. E. Seegmiller, Gout and Lesch-Nyhan Disease. R. O. Brady, The Lipodystrophies. E. F. Neufeld, Mucopolysaccharide Storage Diseases. A. N. Schechter and W. A. Eaton, Sickle Cell Disease. F. J. Rauscher, Jr., and M. B. Shimkin, Viral Oncology. E. M. Scolnick, Virogenes to Oncogenes. **SV40:** R. L. Kirschstein, The Virus and Poliomyelitis Vaccine. N. P. Salzman, The Virus as a Model and Probe of Cellular Regulatory Processes. D. C. Gajdusek and C. J. Gibbs, Jr., Studies on Slow Virus Diseases. J. Robbins and M. B. Lipsett, Endocrinology. E. D. Becker and N. E. Sharpless, Spectroscopy and Chemical Physics. A. W. Pratt, Computers in Biomedical Research. C. L. McIntosh, Cardiac Surgery. V. DeVita, Jr., and A. Goldin, Therapeutic Research in the National Cancer Institute. J. E. Rall, Epilogue. Index of Names.
